

Achieving Balance With Orynoco

At the smallest level our bodies are collections of charged particles (generically referred to as plasma). We constantly interface with our environment at a conscious and unconscious level. We gather information during this interface which sustains us, signals us and informs us.

A stressful day will result in elements of the body's information field being stressed, depleted and out of balance. This is in direct contrast to nature which is our best example of a coherent and continuously balancing field.

A walk in the forest (forest bathing) is a simple way to achieve re-balancing after a challenging day, the balancing effects often being achieved unconsciously. This process is known as entrainment when used regularly. We can further enhance the process by undertaking it consciously and with intent, such as with a walking meditation.

Orynoco simply harnesses the frequencies of the key elements which we are made of, combines them, and arranges for them to be made available in an energetic space where you can employ your consciousness and intention in order to work back towards a balanced state.

There are no boundaries imposed in the process except those held by you, the experiencer. Anything is possible, and each experience is unique.

NOTE: The human body consists of approximately 60 different elements. 99% of the mass of the human body is made up of six elements: oxygen, carbon, hydrogen, nitrogen, calcium, and phosphorus. About 0.85% is composed of another five elements: potassium, sulfur, sodium, chlorine, and magnesium. The other 49 elements exist in trace quantities.
